

DRC-Chemtec Syria

We Are Your Water Partner

Public advisory brief · October 2026

DRC-Chemtec is a founder-led water-technology startup established by Eng. Husam Aljarba in 2023. His more than 21 years of water-treatment experience inform a practical, fit-for-feed advisory approach.

Advice before equipment

The Syria branch starts with consultancy and owner-side engineering. We characterize the water, define the output objective and consider the site, operations and procurement path before proposing a treatment train. Solutions are customized to the application and tested before performance commitments.

Four connected service pathways

Service	What it helps a client decide
Water audits and diagnostics	What is in the water, what is failing and what intervention is justified?
Owner's engineering	Which options, specifications and tender process best protect the client's outcome?
Custom treatment design	Could electro-oxidation, electrocoagulation, electrocapacitive treatment or ZLD help this feed?
Operation and maintenance	Which monitoring, spares, staffing and training sustain performance?

Independent advice requires transparent conflict management. Any supplier relationship relevant to a tender should be disclosed and managed.

A staged route

- **1 / Audit:** Establish the source-water baseline, asset condition and target output.
- **2 / Define:** Compare fit-for-feed options, costs, permits and acceptance criteria.
- **3 / Pilot:** Test the selected pathway under representative conditions.

- **4 / Deliver and operate:** Commission safely, train operators, monitor results and maintain continuity.

Priority starting points can include industrial reuse, municipal treatment rehabilitation, complex contaminant removal and residual management. Larger implementation packages follow site evidence, appropriate approvals and a credible operating plan.

Important: This document describes a service approach, not an awarded project or guaranteed treatment outcome. Work depends on site access, permits, safety, lawful procurement and applicable compliance requirements.
